PROFESSIONAL SUMMARY

QA Engineer with experience in quality assurance for MF-Stack, a fintech platform supporting mutual fund investments. Experienced in planning and executing end-to-end manual testing, preparing test scenarios, test cases and test data, performing functional, regression, integration, system, smoke, sanity and release testing, and managing defects through retesting and closure. Familiar with investor and distributor onboarding, KYC, OTP and consent, SIP and lumpsum investments, STP, switch, redemption, mandates, payment flows, folios and reports. Experienced in REST API testing using Postman, investigating issues with browser developer tools and Sentry, and coordinating with developers and stakeholders across multiple client implementations. Currently developing practical test automation skills with Playwright.

CORE QA & TECHNICAL SKILLS

Testing & QA: Manual testing, functional testing, regression testing, integration testing, system testing, exploratory testing, smoke testing, sanity testing, release validation, SDLC, STLC

Test Planning & Design: Test planning, test scenario preparation, test case design, test data preparation, coverage analysis, test prioritization, end-to-end workflow validation

API Testing: Postman, REST API testing, request and response validation, HTTP status codes, payload validation, negative scenarios, error handling

Defect Management: Bug identification, defect reporting, reproduction steps, severity and priority awareness, defect tracking, retesting, closure, GitHub Issues and project boards

Test Automation: Playwright hands-on practice, automation fundamentals, identifying stable and repeatable regression flows for future automation

Tools & Technologies: Git, GitHub, MySQL, browser developer tools, Sentry, HTML, CSS, JavaScript

Fintech Domain: Investor and distributor onboarding, KYC, OTP and consent flows, SIP, lumpsum, STP, switch, redemption, mandates, payments, folios, reports

Collaboration: Cross-functional coordination, client-specific testing, release readiness support, progress reporting, blocker and risk communication

PROFESSIONAL EXPERIENCE

QA Engineer | Betalectic | September 2025 – Present

- Plan, coordinate and execute QA activities for MF-Stack, a fintech platform for mutual fund investments, supporting onboarding and implementation across multiple clients.
- Prepare and execute test scenarios, test cases and test data for end-to-end investor and distributor journeys, including onboarding, KYC, OTP and consent, SIP, lumpsum, STP, switch, redemption, mandates, payments and reporting.
- Perform functional, regression, integration, system, smoke, sanity and release testing across sandbox, staging and production environments.
- Validate client-specific configurations and workflows to confirm that required functionality behaves as expected before go-live.
- Test REST APIs using Postman, checking request and response data, status codes, payloads and error handling for positive and negative scenarios.
- Identify, document and track defects with clear reproduction steps, screenshots and relevant logs; retest fixes and coordinate with developers through resolution.
- Investigate application behavior using browser developer tools and Sentry logs to help identify and communicate the details of issues.
- Review GitHub issues and pull requests, communicate testing status, and flag configuration or credential changes that may affect test execution.
- Identify test coverage gaps and organize repeatable regression cases that can support future Playwright automation.
- Coordinate testing across concurrent client requirements and communicate daily progress, blockers, risks and expected timelines to relevant stakeholders.
